DETAILED ACTION

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because language such as "The present invention provides", line 2, and "of the invention", line 7. Correction is required by the submission of a new abstract on a separate sheet. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.

3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-11 and 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lemelson et al.

Lemelson shows the surveillance system with plural surveillance terminals as shown in figure 2 and a surveillance center 10 which selects the surveillance terminal to be alerted from among a plurality of surveillance terminals depending upon the identified type of hazard and its location, see col. 4, lines 29-67.

The recited network is analogous to Lemelson's telecommunications and paging control station 11.

The selected surveillance terminal is analogous and obvious to Lemelson's selection of any appropriate terminal such as mobile units 20 or stationary units 19, see col. 10.

Accordingly, a hazard alert signal is sent to a selected surveillance terminal.

Application/Control Number: 10/618,426

Art Unit: 2636

With respect to claims 2, 7, see the studding of plural surveillance terminals with respect to areas in figure 1 and related disclosure in cols. 10 and 11.

With respect to claims 3, 5, 7, the recited commands of different level surveillance modes in which the hazard information signal is sent in different levels of information depth is analogous to Lemelson control center determining the severity of the emergency and dispatching the proper emergency assistance, see col. 4, lines 48-49; the fuzzy logic controller derives a variable defining the degree of danger, col. 5, lines 34-37; degree of danger index, claim 1.

Claim 6, "weight" is analogous to danger index, claim 1 of the patent.

Claims 8 and 10, the alert at the highest accuracy is achieved in view of the danger index.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

Claims 12 and 13 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Lemelson, Lee et al, or Lauterbach et al.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Raizen and Stevens are cited as showing surveillance and dispatch systems

Art Unit: 2636

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DONNIE L. CROSLAND whose telephone number is 571-272-2980. The examiner can normally be reached on Mon-Fri, 9:30a-6:00p.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, JEFFERY HOFSASS can be reached on 571-272-2981. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic/Business Center (EBC) at 866-217-9197 (toll-free).
